

Help them start
changing
their **world**

A teacher's guide to careers at GSK

Giving you the facts you need to help your pupils make the right career decisions.

World-changing, career-defining opportunities

We have exciting,
challenging and rewarding
programmes for students.

At GSK, all of us share a special purpose: to develop and deliver medicines, vaccines and healthcare products that help people do more, feel better, live longer.

A global healthcare company

Around 100,000 people working
in more than 150 countries

Our goal is to be one of the world's
most innovative, best performing
and trusted healthcare companies

Our programmes

We give students who are determined to make a difference a number of ways to take their first step towards tackling global health challenges.

Work Experience

Our work experience varies depending on the GSK site and each has a limited number of places. It is a chance for students to gain useful insights and experiences into life at GSK from colleagues.

Opportunities for students going to university

We have programmes for university students during their course and after graduation. In 2016, we recruited more than 400 Future Leaders globally, over 400 placement students in the UK and many more global direct entry roles in areas across Sales and marketing, Manufacturing and supply chain, Business operations and Research and development.

Apprenticeships

We have recruited over 300 apprentices globally since 2014. Our apprentices achieve their academic qualifications in 2-4 years by learning from industry leaders, as well as building their personal skills on our training programmes.

Inspiring the next generation of scientists

Our future scientists are in school classrooms today, which is why we've developed free resources for 11-14 year olds. Find out more at gskscienceeducation.com
